The One Grant Management System (OneGMS) is a web-based platform that supports the management of the entire grant life cycle for all Country-Based Pooled Funds (CBPFs) and Central Emergency Relief Funds (CERF). The OneGMS promotes efficiency, effectiveness and supports risk management. It harmonises business processes whilst catering to the needs of each context. The system strengthens OCHA's data analysis and information management capacity.

The OneGMS streamlines allocations and facilitates interaction among all stakeholders involved in the grant management process, supporting them in discharging their functions. It allows grant recipients to submit project proposals online. Financial and narrative reporting can therefore be done in real time, together with any project revisions. The system provides for real time tracking of processes, tasks, reminders and feedback.

The OneGMS is a robust mechanism allowing fund managers to oversee and monitor business processes. The system is integrated with other related online systems, including OCHA Contribution Tracking System, OCHA Financial Tracking Service, and UNDP's MPTF Gateway. This real time access to data allows OCHA to quickly provide information and analysis on questions raised both at the field and headquarters level.

The OneGMS strengthens OCHA capacity to effectively implement a risk-based management approach. The system supports fund managers in the implementation of due diligence processes and agreed upon control mechanisms.

CBPF GRANT MANAGEMENT SYSTEM (GMS)

The OneGMS also allows for proper monitoring and accounting of fund management performance. The system monitors the speed and the quality of different processes, including allocations, disbursement of funds, monitoring and reporting.

The CERF Data Hub(<https://cerf.data.unocha.org/>), is publicly accessible and provides detailed contribution and allocation data in real-time.
